

## QUALITY POLICY STATEMENT

The Quality Management System (QMS) is integrated with other management systems & practices to ensure that Spirit complies with customer, regulatory & legal requirements.

The directors & senior managers are committed to the continuous improvement of the QMS & specifically the improvement of internal efficiencies, product quality & customer related processes.

The documented QMS defines processes that focus on the needs & expectations of the business and our customers, with directors & senior managers providing the leadership and resources required to achieve our high expectations for customer service, product quality and on time delivery.

Quality requirements are translated into objectives that are periodically reviewed to determine whether the QMS remains suitable & effective for the needs of the business and whether opportunities for improvement exist. The methods and success of communicating the Quality Policy and quality objectives at appropriate levels throughout Spirit are also reviewed.
